

- 1 Performance accomplishments are a component of Bandura's theory of self-efficacy.

What is meant by performance accomplishments?

---

---

Give a practical example of how they can be used to increase self-efficacy.

---

[2]

- 2 Autonomous performers carry out skills accurately and fluently and are able to think of other things such as tactics during a performance.

What happens in the associative stage of learning to enable some performers to move to the autonomous stage?

---

---

---

---

[2]

3 Below are four examples of sources of motivation to take part in sport or physical activity.

Put a tick (✓) in the **two** boxes next to examples of intrinsic motivation.

A Coach pressure

☐

B Enjoyment

☐

C Self-satisfaction

☐

D Trophy

☐

[2]

4 Vealey's model of sports confidence outlines two types of confidence.

Define trait sports confidence and state sports confidence.

Trait sports confidence .....

.....

.....

State sports confidence .....

.....

.....

[2]

5 Describe mindfulness as a method of stress management.

-----

-----

-----

Suggest **one** disadvantage of using this technique.

-----

----- [2]

6(a)

(i) Give a practical example of a skill that would be classified as high in organisation.

----- [1]

(ii) Give a practical example of a skill that would be classified as low in organisation.

----- [1]

(iii) Identify which practice type would be most suited to each of these skills.

High organisation skill -----

Low organisation skill -----

[2]

(b) Three theories that seek to explain how a performer learns motor skills are:

- Cognitive theory of learning
- Operant conditioning
- Bandura’s theory of social/observational learning.

(i) Complete **Table 6.1** by writing the name of the learning theory which is shown in each coaching situation.  
The first one has been done for you.

Coaching situation	Learning theory
<b>Example:</b> A coach makes sure that the gymnast demonstrates a basic routine to the young performers so that they are physically able to copy it.	<b>Example:</b> Social/observational learning

```

graph LR
    SM[Sensory memory] -- Attention --> STM[Short-term memory]
    STM -- Rehearsal --> LTM[Long-term memory]
    LTM -- Retrieval --> STM
  
```

The diagram illustrates the flow of information through three memory systems: Sensory memory, Short-term memory, and Long-term memory. Sensory memory feeds into Short-term memory through the process of Attention. Short-term memory and Long-term memory are interconnected through Rehearsal (moving from Short-term to Long-term) and Retrieval (moving from Long-term to Short-term).

(i) With reference to the model shown in **Fig. 6.1**, analyse how a performer learns a new skill so that it becomes stored in their long-term memory.

This image shows a blank sheet of white paper with horizontal dashed lines. The lines are evenly spaced and run across the width of the page, providing a guide for handwriting practice. There are no other markings, text, or illustrations on the page.

-----

-----

-----

[5]

(ii) **Other** than rehearsal, suggest **one** method that a coach could use to help information to be stored in the long-term memory.

-----

-----

[1]

(d) Identify the types of guidance being used in each image shown in Figs. 6.2 and 6.3.  
Describe **two** benefits of using them when learning a new skill.

Fig. 6.2

Fig. 6.3

Guidance in Fig. 6.2 .....

Guidance in Fig. 6.3 .....

Benefits .....

.....

.....

.....

.....

.....

.....

[4]

7(a)

Describe the following terms in relation to personality:

Type A -----  
-----

Type B -----  
-----

Introvert -----  
-----

Extrovert -----  
-----

[4]

- [4]

- 
- 
- 
- 
-

-----

-----

-----

-----

-----

-----

-----

-----

-----

-----

[4]

(ii) The coach of a large team tries to increase group productivity by giving the team members individual roles.

Suggest why this might be an effective method of reducing faulty processes.

-----

-----

-----

-----

-----

-----

-----

-----

[2]

(d)

- (i) A small group of adults are learning how to play table tennis at an over 50s social club.

Identify which leadership style would be most appropriate for them and explain why.

---

---

---

---

---

---

---

---

---

---

---

---

[3]

- (ii) Identify another leadership style and use a sporting example to explain when it would be the most appropriate style to use.

---

---

---

---

---

---

---

---

---

---

---

---

[3]

8 Below are two attributions made by different performers.

- |  |
|--|
| 1. I tried really hard in the tennis match today so I totally deserved my win.                           |
| 2. We lost the basketball match because they are a much better team than us; they are top of the league. |

Evaluate the use of the attributions above in relation to Weiner's model of attribution.

Suggest how a coach could use the types of feedback listed below to help a performer attribute successfully:

- knowledge of results
- knowledge of performance
- positive
- negative.

-----

-----

-----

-----

-----

-----

-----

-----

-----

-----

-----

-----

-----

-----

Handwriting practice lines consisting of 20 sets of three horizontal dashed lines.

END OF QUESTION PAPER

# Mark Scheme

Question			Answer/Indicative content	Marks	Guidance				
1			<p>Two marks from:</p> <table><tr><td>1.(Meaning)</td><td>Previous experiences / successes</td></tr><tr><td>2.(Example)</td><td>A footballer taking a free kick recalls the previous attempt led to a goal (and so self efficacy is high) OR A high jumper's coach says to them "you have jumped this height before a few times (so you can jump it today.)"</td></tr></table>	1.(Meaning)	Previous experiences / successes	2.(Example)	A footballer taking a free kick recalls the previous attempt led to a goal (and so self efficacy is high) OR A high jumper's coach says to them "you have jumped this height before a few times (so you can jump it today.)"	2(AO1 × 1 AO2 × 1)	<p>Accept any suitable example where previous experience is used to raise self belief in a <b>specific</b> sports situation</p> <p><u><b>Examiner's Comments</b></u></p> <p>Generally, candidates did well on this question. In the second part some candidates used examples that were events or competitions, rather than showing specific situations and therefore did not gain credit. 'E.g., A coach reminding the team that they won the Football League last year increases self-efficacy' is too general, whereas 'Remembering scoring a penalty in the last game increase self-efficacy' was a common response which was given.</p>
1.(Meaning)	Previous experiences / successes								
2.(Example)	A footballer taking a free kick recalls the previous attempt led to a goal (and so self efficacy is high) OR A high jumper's coach says to them "you have jumped this height before a few times (so you can jump it today.)"								
			Total	2					

### Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
2			Two marks from	2(AO1)	<p><b><u>Examiner's Comments</u></b></p> <p>'Practice' was a common response for this question as well as 'the performer starts to use intrinsic/kinaesthetic feedback'. Some candidates described the associative or autonomous stage of learning, which wasn't the specific focus of the question and did not gain credit.</p>
			1. (Practice)		
			Practice / repetition occurs		
			2. (Compare)		
			Compares / matches their performance with mental image / ideal model		
			3. (Feedback)		
			Performer gets feedback from coach / starts to use intrinsic feedback / starts to develop kinaesthesia OR Performer will have received negative feedback / information about what they need to improve OR Performer will have received knowledge of performance / information about how to refine technique		
			4. (Cues)		
			Performer becomes more aware of environment / cues / requirements of skill	2	
			5. (Motor programmes)		
			Motor programmes are formed		
			6. (Guidance)		
			Coach will have used verbal / visual guidance to help refine skill		
			Total		
			2		
			Total		
3			Two marks from:	2(AO1)	<p>If more than 2 ticks given – marks 1<sup>st</sup> 2 only</p> <p><b><u>Examiner's Comments</u></b></p> <p>This question was well answered; very few candidates did not score.</p>
			1.		
			B (Enjoyment)		
			2.		
			C (Self Satisfaction)	2	
			Total		
			2		
			Total		

### Mark Scheme

Question			Answer/Indicative content	Marks	Guidance				
4			<p>Two marks from:</p> <table><tr><td>1. (Trait sports confidence )</td><td>Innate / stable / enduring / natural / existing level of self belief in <b>sport</b> OR Overall / general level of self belief in <b>sport</b> OR Individual's belief about the extent to which their ability will bring success at <b>sport</b> in general.</td></tr><tr><td>2. (State sports confidence )</td><td>Unstable / changeable / learned level of self belief in <b>specific sporting</b> situation OR Individual's belief about the extent to which their ability will bring success at one particular moment in <b>sport</b></td></tr></table>	1. (Trait sports confidence )	Innate / stable / enduring / natural / existing level of self belief in <b>sport</b> OR Overall / general level of self belief in <b>sport</b> OR Individual's belief about the extent to which their ability will bring success at <b>sport</b> in general.	2. (State sports confidence )	Unstable / changeable / learned level of self belief in <b>specific sporting</b> situation OR Individual's belief about the extent to which their ability will bring success at one particular moment in <b>sport</b>	2(AO1)	<p><u>Examiner's Comments</u></p> <p>This question required candidates to give a definition of both terms. Many candidates repeated the words 'confidence' and 'sports' in both responses, effectively only defining the term 'trait' and 'state'. For example, 'trait sports confidence is inborn confidence in sport' so not showing enough knowledge of terminology to gain credit.</p>
1. (Trait sports confidence )	Innate / stable / enduring / natural / existing level of self belief in <b>sport</b> OR Overall / general level of self belief in <b>sport</b> OR Individual's belief about the extent to which their ability will bring success at <b>sport</b> in general.								
2. (State sports confidence )	Unstable / changeable / learned level of self belief in <b>specific sporting</b> situation OR Individual's belief about the extent to which their ability will bring success at one particular moment in <b>sport</b>								
			Total	2

(Time)	Takes time to practice	3. (Not all can do)	Not all people can focus / concentrate enough to gain any benefit	4. (Not taken seriously)	Individual may not take it seriously / think it's silly / struggle to find a quiet space	5. (Maturity)	May not be mature enough to use this as a technique	6. (Performing)	Can't be done whilst performing	7. (Not somatic)	Might not control somatic / physical stress	2(AO1 × 1 AO3 × 1)	<p>Disadvantage – mark 1<sup>st</sup> response only</p> <p><u>Examiner's Comments</u></p> <p>Where marks were given for the description, it was more commonly for 'meditation'. Candidates found it hard to give a disadvantage. Successful responses focused more on how it takes time to learn, or how it's difficult to do when performing.</p>
1. (Mindfulness description)	Meditation OR OR Focuses on the present OR Reflection																		
2. (Time)	Takes time to practice																		
3. (Not all can do)	Not all people can focus / concentrate enough to gain any benefit																		
4. (Not taken seriously)	Individual may not take it seriously / think it's silly / struggle to find a quiet space																		
5. (Maturity)	May not be mature enough to use this as a technique																		
6. (Performing)	Can't be done whilst performing																		
7. (Not somatic)	Might not control somatic / physical stress																		
			Total	2															

### Mark Scheme

Question			Answer/Indicative content	Marks	Guidance										
6	a	i	One mark from:  <table><tr><td>1. (example of HO skill)</td><td>Dribbling in basketball OR somersault in trampolining OR running OR golf swing OR football tackle OR chest pass</td></tr></table>	1. (example of HO skill)	Dribbling in basketball OR somersault in trampolining OR running OR golf swing OR football tackle OR chest pass	1(AO2)	Accept any suitable example of a skill that is hard to break down into sub-routines								
1. (example of HO skill)	Dribbling in basketball OR somersault in trampolining OR running OR golf swing OR football tackle OR chest pass														
		ii	One mark form:  <table><tr><td>1. (example of LO skill)</td><td>Swimming (stroke)/front crawl OR triple jump OR tennis serve OR javelin throw OR basketball lay-up OR trampolining sequence</td></tr></table>	1. (example of LO skill)	Swimming (stroke)/front crawl OR triple jump OR tennis serve OR javelin throw OR basketball lay-up OR trampolining sequence	1(AO2)	Accept any suitable example of a skill that is easy to split into sub-routines								
1. (example of LO skill)	Swimming (stroke)/front crawl OR triple jump OR tennis serve OR javelin throw OR basketball lay-up OR trampolining sequence														
		iii	Two marks from  <table><tr><td>1. (Practice type for HO skill)</td><td>Whole</td></tr><tr><td>2. (Practice type for LO skill)</td><td>Part OR Whole-part-whole OR Progressive part</td></tr></table>	1. (Practice type for HO skill)	Whole	2. (Practice type for LO skill)	Part OR Whole-part-whole OR Progressive part	2(AO2)	<b><u>Examiner's Comments</u></b>  While some responses were successful, some candidates got the high and low organisation the wrong way round, others gave unrelated practice methods.  In Question 6 (a) (i) and (ii) some candidates didn't give skills, instead giving events or sport such as 'a marathon' which received no credit.						
1. (Practice type for HO skill)	Whole														
2. (Practice type for LO skill)	Part OR Whole-part-whole OR Progressive part														
	b	i	Four marks from  <table><tr><th>Scenario</th><th>Learning theory</th></tr><tr><td>1.</td><td>Social learning theory / observational learning theory</td></tr><tr><td>2.</td><td>Cognitive theory of learning</td></tr><tr><td>3.</td><td>Operant conditioning</td></tr><tr><td>4.</td><td>Operant conditioning</td></tr></table>	Scenario	Learning theory	1.	Social learning theory / observational learning theory	2.	Cognitive theory of learning	3.	Operant conditioning	4.	Operant conditioning	4(AO2)	<b><u>Examiner's Comments</u></b>  This was well answered. Errors tended to focus around example 2 and 3, the majority of candidates achieving marks in example 1 and 4.
Scenario	Learning theory														
1.	Social learning theory / observational learning theory														
2.	Cognitive theory of learning														
3.	Operant conditioning														
4.	Operant conditioning														

### Mark Scheme

Question			Answer/Indicative content	Marks	Guidance																				
		ii	<p>Two marks from: Mark 1<sup>st</sup> two only</p> <table><tr><td>1. (Coach influence)</td><td>Coach has influence to encourage correct learning</td></tr><tr><td>2. (Manipulation)</td><td>Manipulation of environment means 'correct' learning will (almost always) happen</td></tr><tr><td>3. (Maturity)</td><td>Can be used on young performers</td></tr><tr><td>4. (Stage of learning)</td><td>Effective with beginners / experts / all stages of learning</td></tr><tr><td>5. (Positive Reinforcement)</td><td>(Positive) reinforcement / praise / rewards <b>leads to</b> effective skill learning / increased confidence / increased motivation / strengthens S- R bond</td></tr><tr><td>6. (Punishment)</td><td>Punishment points out errors / where changes need to made</td></tr><tr><td>7. (Shaping)</td><td>Enables coaches to praise skills that are along the right lines (even if elements are performed wrong) OR shaping allows stages of success</td></tr><tr><td>8. (Automatic)</td><td>Developing S-R bonds leads to automatic responses / quicker reactions</td></tr><tr><td>9. (S-R bonds)</td><td>Helps performers to develop <b>correct</b> S-R bond</td></tr><tr><td>10. (Quicker)</td><td>Learning is <b>quick</b> if a reward is given (on every occasion / complete reinforcement is used)</td></tr></table>	1. (Coach influence)	Coach has influence to encourage correct learning	2. (Manipulation)	Manipulation of environment means 'correct' learning will (almost always) happen	3. (Maturity)	Can be used on young performers	4. (Stage of learning)	Effective with beginners / experts / all stages of learning	5. (Positive Reinforcement)	(Positive) reinforcement / praise / rewards <b>leads to</b> effective skill learning / increased confidence / increased motivation / strengthens S- R bond	6. (Punishment)	Punishment points out errors / where changes need to made	7. (Shaping)	Enables coaches to praise skills that are along the right lines (even if elements are performed wrong) OR shaping allows stages of success	8. (Automatic)	Developing S-R bonds leads to automatic responses / quicker reactions	9. (S-R bonds)	Helps performers to develop <b>correct</b> S-R bond	10. (Quicker)	Learning is <b>quick</b> if a reward is given (on every occasion / complete reinforcement is used)	2(AO3)	<p>Mark 1<sup>st</sup> two only</p> <p>Pt 5 – BOD negative reinforcement leads to effective skill learning</p> <p><u><b>Examiner's Comments</b></u></p> <p>More successful responses focused on discussing benefits, rather than describing how performers learn using operant conditioning. Some candidates gave more than two responses but only the first two responses are marked in such questions.</p>
1. (Coach influence)	Coach has influence to encourage correct learning																								
2. (Manipulation)	Manipulation of environment means 'correct' learning will (almost always) happen																								
3. (Maturity)	Can be used on young performers																								
4. (Stage of learning)	Effective with beginners / experts / all stages of learning																								
5. (Positive Reinforcement)	(Positive) reinforcement / praise / rewards <b>leads to</b> effective skill learning / increased confidence / increased motivation / strengthens S- R bond																								
6. (Punishment)	Punishment points out errors / where changes need to made																								
7. (Shaping)	Enables coaches to praise skills that are along the right lines (even if elements are performed wrong) OR shaping allows stages of success																								
8. (Automatic)	Developing S-R bonds leads to automatic responses / quicker reactions																								
9. (S-R bonds)	Helps performers to develop <b>correct</b> S-R bond																								
10. (Quicker)	Learning is <b>quick</b> if a reward is given (on every occasion / complete reinforcement is used)																								

# Mark Scheme

Question			Answer/Indicative content	Marks	Guidance																				
	c	i	<p>Five marks from</p> <table><tr><td>1. (Sensory memory)</td><td>Information is passed from our environment into sensory memory OR sensory memory has limitless capacity / &lt;1 sec duration</td></tr><tr><td>2. (Selective attention)</td><td><u>Selective</u> attention filters the into the performer needs to learn the skill OR <u>selective</u> attention focuses on relevant stimuli OR Relevant stimuli / information enters the STM</td></tr><tr><td>3. (Forget)</td><td>Irrelevant stimuli gets discarded / forgotten</td></tr><tr><td>4. (STM capacity / duration)</td><td>STM can hold 5–9 / 7+/- 2 items / up to 30 seconds</td></tr><tr><td>5. (Perception / Decision making)</td><td>Perception occurs / incoming information is interpreted / judged OR decisions made in STM</td></tr><tr><td>6. (Rehearsal helps retention)</td><td>If the performer wants to <b>retain</b> / <b>store</b> the information / skill then rehearsal / practice will help</td></tr><tr><td>7. (Chunking)</td><td>Chunking helps increase storage / capacity</td></tr><tr><td>8. (Encoded)</td><td>The information becomes encoded</td></tr><tr><td>9. (Motor programme)</td><td>The skill now becomes stored as a motor programme in the LTM</td></tr><tr><td>10. (Retrieval)</td><td>The information is retrieved / recalled / decoded to the STM <b>then</b> updated / encoded back in the LTM (to aid LTM storage)</td></tr></table>	1. (Sensory memory)	Information is passed from our environment into sensory memory OR sensory memory has limitless capacity / <1 sec duration	2. (Selective attention)	<u>Selective</u> attention filters the into the performer needs to learn the skill OR <u>selective</u> attention focuses on relevant stimuli OR Relevant stimuli / information enters the STM	3. (Forget)	Irrelevant stimuli gets discarded / forgotten	4. (STM capacity / duration)	STM can hold 5–9 / 7+/- 2 items / up to 30 seconds	5. (Perception / Decision making)	Perception occurs / incoming information is interpreted / judged OR decisions made in STM	6. (Rehearsal helps retention)	If the performer wants to <b>retain</b> / <b>store</b> the information / skill then rehearsal / practice will help	7. (Chunking)	Chunking helps increase storage / capacity	8. (Encoded)	The information becomes encoded	9. (Motor programme)	The skill now becomes stored as a motor programme in the LTM	10. (Retrieval)	The information is retrieved / recalled / decoded to the STM <b>then</b> updated / encoded back in the LTM (to aid LTM storage)	5(AO3)	<p><b>Do not accept:</b> STSS (as this q says refer to model)</p> <p><b>Do not accept:</b> Words from the diagram alone - so “rehearsal helps info pass from STM to LTM” is TV</p> <p>For pt 6- there needs to be some reference to rehearsal helping the performer <b>retain</b> the info, or an alternate word for rehearsal to show understanding.</p> <p><b>Accept:</b> examples/coaching points of a named skill in place of ‘information’ throughout the response.</p> <p><u><b>Examiner’s Comments</b></u></p> <p>This question proved to be a good differentiator. The most successful responses stated a term on the model given and clearly described it or how it works. They also clearly described how information is passed between the stores using alternate terms to those given on the diagram fully showing their understanding. Less successful responses repeated terms as they appeared in the question, gaining no credit. The question asked about how a performer learns a skill so that it becomes stored in their long-term memory. Some candidates focused on how a performer uses their memory to ‘perform’ a skill, rather than ‘learn’ it. While most candidates scored some marks on this question, the more successful responses showed an understanding of this distinction allowing those candidates access to top marks.</p> <p>Exemplar 1</p>
1. (Sensory memory)	Information is passed from our environment into sensory memory OR sensory memory has limitless capacity / <1 sec duration																								
2. (Selective attention)	<u>Selective</u> attention filters the into the performer needs to learn the skill OR <u>selective</u> attention focuses on relevant stimuli OR Relevant stimuli / information enters the STM																								
3. (Forget)	Irrelevant stimuli gets discarded / forgotten																								
4. (STM capacity / duration)	STM can hold 5–9 / 7+/- 2 items / up to 30 seconds																								
5. (Perception / Decision making)	Perception occurs / incoming information is interpreted / judged OR decisions made in STM																								
6. (Rehearsal helps retention)	If the performer wants to <b>retain</b> / <b>store</b> the information / skill then rehearsal / practice will help																								
7. (Chunking)	Chunking helps increase storage / capacity																								
8. (Encoded)	The information becomes encoded																								
9. (Motor programme)	The skill now becomes stored as a motor programme in the LTM																								
10. (Retrieval)	The information is retrieved / recalled / decoded to the STM <b>then</b> updated / encoded back in the LTM (to aid LTM storage)																								

# Mark Scheme

Question			Answer/Indicative content	Marks	Guidance								
					<p>The sensory memory store is limitless in capacity and is able to hold stimuli/info for upto 1 second. Selective attention then takes place and the information deemed relevant reaches the short-term memory store. The STM can hold 7 items and information for upto 30 seconds, e.g. the key skills behind riding a bike (to balance up-right) are put together in the 'working memory store' to put together the skill as a whole. The information and skill is rehearsed (practised) which moves it into the long-term memory which is limitless in time and capacity. Meaning the performer will remember how to ride a bike long-term. Information from the STM can be retrieved from the back into the LTM as if something is forgotten e.g. to hold the handle bars.</p> <p>The example scored 4/5 and is written clearly and concisely. Marks were given for:</p> <ul style="list-style-type: none"><li>• Point 1 (sensory memory – limitless capacity / &lt;1 sec duration)</li><li>• Point 2 (selective attention – relevant information reaches STM)</li><li>• Point 4 (STM capacity / duration)</li><li>• Point 6 (skill is practised moves into LTM).</li></ul> <p>Further points aren't given as retrieval of information is about performing the skill, to make the point relevant to 'learning' as the question asks the candidate needs to also refer to how the information that has been retrieved from LTM to STM is then updated/encoded back into the LTM.</p>								
		ii	<p>One mark from Mark 1<sup>st</sup> one only</p> <table><tr><td>1.</td><td>Chunking / grouping</td></tr><tr><td>2.</td><td>Association / linking to previously learned skill</td></tr><tr><td>3.</td><td>Make information relevant / meaningful to the performer.</td></tr><tr><td>4.</td><td>Avoid overload</td></tr></table>	1.	Chunking / grouping	2.	Association / linking to previously learned skill	3.	Make information relevant / meaningful to the performer.	4.	Avoid overload	1(AO1)	<p>Mark 1<sup>st</sup> one only</p> <p><b><u>Examiner's Comments</u></b></p> <p>This question was generally well answered with chunking being the most common answer. Some candidates talked about repetition which is the same as rehearsal and so achieved no marks.</p>
1.	Chunking / grouping												
2.	Association / linking to previously learned skill												
3.	Make information relevant / meaningful to the performer.												
4.	Avoid overload

(Perception of others effort)	More likelihood of perception that others aren't trying	9. (Role / Identity)	Less chance of everyone having a / knowing their	4(AO3)	<p><b>Do not accept</b> reference to small team alone. Although BODs can be awarded for clear comparison.</p> <p><u><b>Examiner's Comments</b></u></p> <p>This question was a good differentiator and required candidates to understand Steiner's model and apply it to group size. Candidates performed well on this question with most candidates achieving some marks, and some candidates obtaining full marks. Common responses included Point 1 (breakdown in communication), 2 (co-ordination problems), 4 (motivation problems), 5 (Ringelmann effect), 6 (social loafing), although many other points were also accessed. Less successful responses described Steiner's model, rather than used knowledge of it to answer the question.</p> <p><b>Exemplar 2</b></p> <p><i>This can A large team can cause both motivational losses and co-ordination losses. A large team can cause co-ordination losses, known as the Ringelmann Effect, as having more people involved means that it is harder to be co-ordinated and be able to successfully perform skills as it increases the chances of failure. Also, if the team has more players in, they may that may mean people get less game time. This can cause motivational losses as it can cause a decrease in social cohesion and lead to social loafing for some players, who may feel that no matter how hard they try they will always be put on the bench.</i></p> <p>The example is a clear and well written</p>
(Larger teams therefore...)																										
1. (Communication)	More chance of breakdown in communication / harder to make decisions																									
2. (Coordination – positional)	More chance of coordination problems (on set plays / attacking moves / tactics etc)																									
3. (Coordination – timing)	More reliant on more peoples timing being right OR more chance of timing issues																									
4. (Motivation )	More chance of motivation problems (individuals lowering effort)																									
5. (Ringelmann effect)	As group size increases individual performance decreases OR more likely to experience Ringelmann effect																									
6. (Social loafing)	More chance of people <b>social loafing</b>																									
7. (Reliance on others)	Means more people relying on others to do their job (increases likelihood of social loafing)
